

REPAIR A LEAK AT GUTTER SEAM

Here is an explanation on how to repair a leak at a gutter seam:

STEP-1

Clean All Debris out from the area being patched

STEP-2

Using a rag, completely dry the area around the leak

STEP-3

Apply Henrys 208, 6 inches past the leak on each side

STEP-4

Use your scissors to cut the mesh tape so it fits in the gutter

STEP-5

Gently press the mesh tape into the Henrys 208

STEP-6

Using your flexible 2 inch putty knife, apply Henrys 208 to the mesh tape, completely covering it

You have now repaired the leak at your gutter seams. This method is a long-lasting, quick way to patch leaky gutters. The asphalt covers the leak and the mesh tape stops the asphalt from splitting in hot or cold weather. Although this was not our invention, we have used it with great success, and we hope it works for you too!

What You Will Need:

2 Inch Putty Knife

6 inch non adhesive mesh tape

Scissors

Rags
